

EngSoft Solutions

Providers of

Water Quality & Distribution/Collection Software

Backflow Prevention - Hydrants - Meters - Valves - FOG/Grease Traps

Reclaimed Water - Fire Suppression Systems

Work Order Management and Inventory Control Software

* Special Installation Notes

This version requires installation on a separate computer acting as an "Application Server". This server may not be used as a workstation. The "server" does not need to be dedicated, but the configuration must be robust and adequate to handle all applications running on that server. Client Software will be installed on each workstation. Connection speed must be at least 512K for nominally acceptable performance. 100Mbps or better recommended

Client and Server software may not be installed on the same machine.

XC2® System Requirements: Server CPU (minimum requirements)

Operating Systems:

XC2 Server Program: Windows 2000/2003 Server (* See Note Below)

The XC2 Server database software engine handles all data file access.

User Permissions/Drive Mapping is not necessary for Clients to Access Server Software

CPU: (Minimum)

500+ MHz CPU (Minimum)

256 RAM mb(Minimum)

Recommended

1.0 GHz (or Better) Recommended (Dual Process Suggested)

1gb (or More) RAM Recommended.

Program Requires 100 MB Disk Space. The data file size is dependent on the number of records.

Backup is handled by the built-in "Backup Scheduler". Your regular network backup should then backup these "backup files". A second physical hard drive for backup purposes is suggested, though not necessary. The second backup drive could be on the same or a different computer. File backup software such as "Second Copy" by Centered Systems is suggested.

***** UPS *** An Uninterruptable Power Supply is *Highly Recommended***

* Server OS May Also be Win2K/XP Pro, if less than 5 Concurrent Users

Server is not required to be running a Server OS, but can be a regular workstation type machine that is not being used as a workstation for any reason.

XC2® 2K5 System Requirements: Client CPU's (Minimum Requirements)

Operating System:

XC2 Client Program: Windows NT 4.0/ Windows 2000/Windows XP

CPU: (Minimum)

450+ MHz CPU (Minimum)

RAM 128 MB (Minimum)

Monitor Minimum resolution 800x600

Program Requires 75 MB Disk Space.

Recommended

700 mhz (or Better) Recommended

256mb (or More) Recommended

1024x 768 Recommended

Client Software does not access the data directly on the server, as such, file access permissions do not need to be set on the server machine.
